 2-Car Garages

Parapet walls create a modern, flat roofline that disguises traditional gable ridges to give this builder the best of both worlds: a contemporary look with a traditional construction method. The design incorporates vertical and angled articulation and a variety of materials to add dimension and curiosity to the building and individuality to each unit. Interiors feature contrasting colors on smooth finishes, like tile that extends from the floor up the wall to the ceiling. The open great room layout is perfect for entertaining.
